GIS Contracted by Quality Inserting for SLS3000 Including Rebuild and Relocation

Vancouver, Canada - *Quality Inserting*, a fast growing Vancouver based outsource company, chose **GIS** when they wanted to continue their growth across Canada. **GIS** provided a Muller Martini SLS3000 and was contracted to fully rebuild the machine based on a 256 point audit list that determined the areas that needed to be rebuilt. **GIS** disassembled the entire machine, performed the repairs around the audit and prepared the machine in a like- new condition, fully packed and ready for installation.

"GIS was chosen to provide the service based on Randy Seidel's extensive experience on the SLS3000 and relocation services" said Richard Renuad, President and CEO of *Quality Inserting*.

"We were extremely happy with the results of the rebuilding GIS performed, as it is in a "like new condition" said Derrill Imrie, General Manager.

"This was a great experience for me as I had originally sold and implemented this SLS3000 a number of years ago to its original location" said Randy Seidel, President & CEO of **GIS**.

Rebuilding Quality Inserting SLS3000 Machine – Case Study

Modules being rebuilt

Pockets rebuilt and completed

Grippers rebuilt and completed

Modules packaged and ready for shipment
